

Computer Engineering Department, S V N I T, Surat.
End-Sem Examinations, April 2019

B Tech IV (CO) – 8th semester
Course: (CO-428) Cloud Computing (EIS-II)

Date: 1st May 2019

Time: 14:30 to 17:30

Marks: 50

Instructions:

1. Write your B Tech Admission No/Roll No. and other details clearly on the answer books and write your B.Tech Admission No. on the question paper too.
2. Assume any necessary data but give proper justifications.
3. Be precise and clear in answering the questions.

Q1. Answer the following.(Any Five) [25]

1. Identify and define the term which refers to the delivery of anything as a service. Explain any five services offered by this term.
2. What are the advantages of virtualization over traditional computers? Why is virtual machine required in IaaS?
3. Name and explain the SaaS services that attract start-up companies. Give example of real time application for this. Enlist and explain characteristics of SaaS.
4. Assume that Mumbai, Delhi and Kolkata are having interconnected data centers and they want to have virtualization. Suggest the kind of virtualization required for them and why?
5. Explain in details how Web service exposes Web methods over the Web. Explain primary elements of web services.
6. Azure platform is composed of four different components. Explain each in details.

Q2. Answer the following.

1. Mention characteristics to establish trust among peers. Write key issues to be addressed in the design of a cost-effective P2P reputation system. [03]
2. Explain and give advantages of Google Cloud Print. [03]
3. How can you break down the security of any data object as concentric layers of increasingly pervasive security? Name the architecture or application which is suitable to achieve this and why? [04]
4. Apart from a major threat explain other benefits of identity management that occurs every day. [03]

OR

Explain any four aspects of identity management systems.

5. Illustrate any two unique technologies for cloud computing data security other than confidentiality, integrity and availability. [04]

6. What are the phases of SLA lifecycle? Define every phase. [04]

OR

Draw and explain the terms of a two-tier classification for a systematic approach based on the design to address reputation systems for cloud services. Name three representative reputation systems.

7. Write short note on: [04]

1. Hypervisor Security(attacks and security measures)
2. Virtual Machine Security(Isolation and hardening)
